

3 TERMINAL LOW DROP OUTPUT VOLTAGE REGULATOR

The KIA78D × × Series are fixed positive output low dropout type, 3-pin voltage regulators with positive outout. These regulators are used to provide a stabilized output voltage from a fluctuating DC input voltage. These are 12 fixed output voltage, as follows ; 2.5V, 3.3V, 3.5V, 5V, 6V, 8V, 9V, 10V, 12V, and 15V. The maximum current capacity is 1A for each of the above voltage.

FEATURES

- Built in over voltage protection circuit, over current protection circuit and thermal shut down circuit.
- Richly diverse Lineup.
- Low minimum I/O voltage differential.
